

Camouflage, mask or highlight elements within video footage for effective presentation

Product | Information Sheet

The quick and easy way to mask and edit video footage

Whether preparing evidence for court, meeting your data protection obligations or creating sensitive footage for broadcast, the ability to hide, alter or highlight elements within video is vital.

Easy to use, powerful effects

DEMON edit is a powerful and easy to use tool that requires almost no operator training. It's intuitive interface means that, in as little as 15 minutes, you can quickly begin to camouflage and mask everything from people's faces to voices and background noises. The software automates camouflaging no matter how complex the track a person takes. In addition, objects and people can be highlighted and tracked. More than one object can be camouflaged and arrows or text can be added to highlight specific objects of interest.

Major cost and time saving

DEMON edit delivers significant time, training and cost savings compared to traditional video manipulation packages.

Running on a standard Windows PC, DEMON edit handles most popular video formats - including VHS, time-lapse tapes, using the included DEMON record software, AVI's and PC video files to quickly produce professional results. Once the camouflaging is completed the results can be output to DVD or PC files for presentation.

At a glance

People, objects and backgrounds can be simultaneously camouflaged

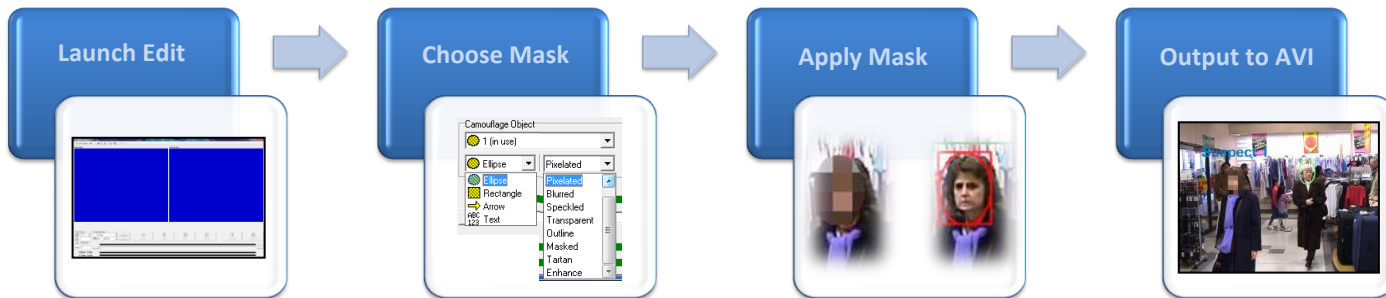

Pixelation, blur and solid colour camouflage and masking options

Audio and voice disguising, including beeping and muting

Annotation and enhancement of images

Automatic encrypted audit trail

In action

- Easy to use
- Multi AVI read methods
