

## Professional presentations the easy way

DEMON present allows you to automatically compile any number of sources (video, audio, computer files and animations) into a single seamless presentation. Especially suited for a courtroom presentation and custody suites, DEMON present is equally at home in the corporate boardroom.

## Complete control of your presentation

You have complete control of how your presentation is created and delivered. Include as many items as required and the package automatically sorts into file type allowing you to easily decide what to show and how to show it. DEMON present uses the new Dual-Head capabilities of Windows XP and Vista so you work within a simple user interface and your audience sees a polished professional presentation.

## On the fly editing of your presentation

Once compiled, the presentation can be easily and quickly edited on the fly, so that evidence can be played in any order and as many times as necessary in real time. With a wide range of input of output functions, the presentation can be shown on almost any external display such as a large screen or projector. It can also be delivered as a stand-alone evidence viewer, useful in video identity parades and interrogation situations.

### At a glance

Complete control of evidence presentation

Simple drag-and-drop interface

Supports video, audio, data and animations
